TECHT

Building Trust in Software Development

A neutral third party facilitating software development between two parties. Build technology the smart way.

VERIFIED MATCHING

Using A.I. recommendation engine, get matched with the most relevant Development House

SMART CONTRACT AS A SERVICE

Use a state of the art no code smart contract solution to create agreements between two parties

VALIDATION AND ESCROW

Get code and deliverables validated by experts with funds and code stored in escrow until approval

Verified Matching Service

TECHT Verifies Development Houses based on several criteria including portfolio, references, ISO standards, credit rating and operational efficiency.

The framework is below:

Verification Levels	Client Reviews	Client Review Score	Credit Report	Legal Status
Bronze Verified	1+ verified review	No minimum review score required	N/A	Active and legally registered business entity
Option A: Silver Verified	5+ verified reviews	Average of 4.0 or higher	Very Low Risk / Low Risk	Active and legally registered business entity
Option B: Silver Verified	15+ verified reviews	Average of 4.8 or higher	Moderate Risk *with no negative information found*	Active and legally registered business entity
Option A: Gold Verified	10+ verified reviews	Average of 4.5 or higher	Very Low Risk	Active and legally registered business entity
Option B: Gold Verified	20+ verified reviews	Average of 4.8 or higher	Low Risk	Active and legally registered business entity
Option C: Gold Verified	25+ verified reviews	Average of 4.8 or higher	Moderate Risk *with no negative information found*	Active and legally registered business entity

Utilising an A.I. a recommender engine, based on your requirements such as budget, type of organisation, TECHT will recommend relevant development agencies as well as a TECHT mentor getting in touch to discuss your shortlist for a personalised touch.

TECHT

**Building Trust in
Software Development**

Smart Contract as a Service

TECHT will develop a smart contract to facilitate the agreement between two parties. Deliverables and milestones are added into the contract along with validators. Validators can review deliverables on whether it meets the requirements specification.

The Smart Contract is enforceable under the framework proposed here by LawTech UK to further manage any potential disputes between parties to get a fair result.

Smart Contracts are built run on the Etherum blockchain and are written in Solidity.
The following type of Smart Contracts are.
· ERC-20 token contracts
· ERC-721 Smart Contracts

Smart Contracts are:
· Secure: They use cryptography to stop people altering records.
· Transparent: Everyone can see on the blockchain what the smart contract is and what it's being used for.
· Autonomous: They work automatically, so you're not having to wait for someone to push a button.
· Accurate: Because smart contracts are written in code, they don't rely on the grey areas of a language and what words mean.

Software Validation & Escrow

TECHT will validate code and software delivery alongside expert partners 'techUK' who have been in industry for 30+ years. Software validation takes place that clients can be satisfied that the code delivered to them is an acceptable standard and is fit for purpose.

Software code and funds can be held in escrow until all parties are satisfied with the arrangement.

Validation services include validation whether the code:

⊘ Is accessible

⊘ Is readable

⊘ Are virus-free

⊘ Licence compliance management analysis

⊘ Results of user acceptance testing

⊘ Is encrypted and associated encryption keys/passwords are correct

⊘ Code maintainability, sustainability, security and performance

Enterprise Grade

Designed with 'enterprise' in its DNA to meet the most rigorous requirements for scalable, production ready networks.

Enterprise Quality Comes Standard
Build enterprise ready networks on the most proven platform with built-in HA/DR and automatic failover, performance, secure network isolation, environment metric dashboard, SLAs and dedicated 24×7 support available.

Don't Like Sharing?
Our Dedicated Consortium Offering provides a hardened compute stack with custom security control and isolated tenancy completely devoted to just your private permissioned business network.
